BACK-END DEVELOPER INTERN

deepAfrica is an online solutions provider offering comprehensive solutions that facilitate personal and institutional growth.

We take cognizance of the fact that our most valuable asset is our staff. Other than providing the ideal corporate environment for personal and professional growth; we have attracted and engendered a team that is passionate about deepAfrica's fundamental defining goal: dedication to facilitating innovation and the use of Information Technology to make a worthwhile contribution in our society.

Job Description

We are looking for a driven and analytical Back-end Developer Intern who will work with our team members in the Development field to troubleshoot and improve current back-end applications and processes. If you have excellent programming skills and a passion for developing applications or improving existing ones, we would like to meet you.

Responsibilities

- Write secure code.
- Participate in all phases of the development life cycle.
- Troubleshoot and fix bugs/flaws to ensure servers are running optimally.
- Follow emerging technologies.
- Build reusable code and libraries for future use.
- Perform UI tests to optimize performance.
- Liaise with developers, designers and system administrators to identify new features.
- Provide training and support to internal teams.
- Be able to develop Web Applications.

Requirements

- Hands-on experience with programming languages like JavaScript and its frameworks, Java, Ruby, PHP and Python.
- Have knowledge on the programming languages frameworks like Y2, Laravel, Codeigniter and Angular.

- Ability to work independently or with a group.
- Experience with automation tools like Puppet, Chef etc.
- Knowledge of either CoffeeScript or LiveScript.
- Working knowledge of CMS (content management systems like WordPress) framework.
- Proven work experience as a Back-end developer.
- Excellent analytical and time management skills.
- Degree or a Diploma in Computer Science or relevant field.

Skills

- Experience with version control, such as Git.
- Basic understanding of front-end technologies and platforms, such as JavaScript, HTML5, and CSS3.
- Data migration, transformation, and scripting.
- Setup and administration of backups.
- Proficient knowledge of the back-end programming language/framework that the given company relies upon.
- User authentication and authorization between multiple systems, servers, and environments.
